

Alexis® O

C-Section Protector-Retractor*

SETUP GUIDE

Prepare the surgical site according to standard procedure, making sure the skin is clean and dry.

- 1 Make an abdominal incision along the marked incision line.

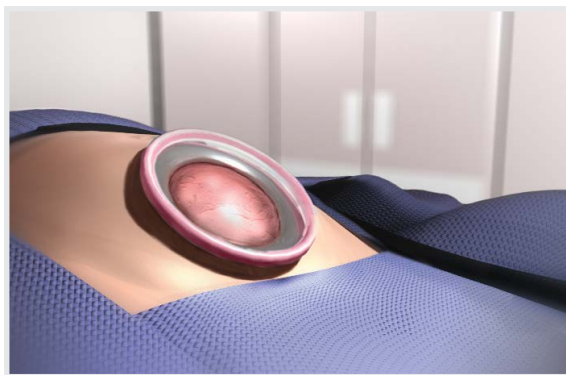

- 2 Insert the Alexis O C-section device's orange ring through the incision so that the lower portion is slightly superior to the pubic bone, between the abdominal wall and the bladder.

- 3 Carefully check to ensure that no bowel or tissue entrapment has occurred before retraction is initiated.

- 4 Gently grasp the pink retraction ring at 10 and 2 o'clock, and pull up until the orange ring sits tightly against the peritoneal layer. Roll the pink ring inward to achieve the desired retraction.

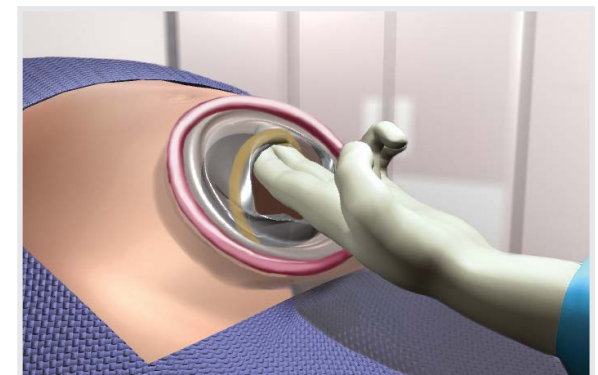

- 5 Double-check to ensure that no bowel or tissue entrapment has occurred. (See Figure 3.)

- 6 Perform the cesarean section through the retracted and protected incision site.

- 7 Perform the required internal stitching through the retracted incision site.

- 8 Retrieve the Alexis O C-section device by removing the orange ring from the peritoneal cavity.

*G6313 (Large) and G6314 (Extra Large) are indicated for use in nonurgent C-section delivery.
